Document Type Quality Manual	Revision No: 0	Date Adopted: 13 Aug 2019	Page No: Page 1 of 2
Document Code: QM 4-04	HANDLING OF TEST ITEMS		

Introduction

This document provides the basic principles for handling incoming test items in the laboratories of BFAR-RFLD XII according to the requirements of the sub clause 7.4 of the PNS ISO/IEC 17025:2017 standard.

1. Receipt and Recording of Incoming Test Items

Incoming test items are recorded upon their receipt at BFAR-RFLD XII and checked macroscopically for any possible damage according to specific procedures and instructions.

When the item does not conform to the requirements for the test, or there is doubt on its suitability for the analysis, the item is not accepted and the customer is advised on the requirements for the laboratory testing.

Each incoming test item is uniquely identified and is further forwarded to the respective destination laboratory by the use of the appropriate means. This identification provides a traceability chain of all steps of the service cycle related to the testing of each item.

2. Handling, Protection, Storage, Retention, Disposal or Return of Incoming Test Items within the Testing Laboratories

Each test item upon its receipt in the respective laboratory is stored in designated areas under controlled environmental conditions and equipment as long as required by the respective specifications.

Handling instructions provided with the items are followed to avoid deterioration, loss and damage to the item during storage, handling and preparation.

BFAR-RFLD XII provides a system of handling of the test item to protect its integrity, and the interest of the laboratory and the customer. Handling of the test items includes the transportation, receipt, handling, storage, protection, retention and disposal.

3. Responsibilities

The Analyst implements the analysis plan and procedure and maintains all the records.

The Technical Manager monitors and make sure that procedures are implemented and followed properly.
