Document Type Quality Manual	Revision No: 0	Date Adopted: 13 Aug 2019	Page No: Page 1 of 2
Document Code: QM 4-07	ENSURING THE VALIDITY OF RESULTS		

Introduction

This document provides the basic principles for ensuring the validity of test results according to the requirements of the sub clause 7.7 of the PNS ISO/IEC 17025:2017 standard.

1. Quality Assurance and Control

BFAR RFLD XII maintains a procedure for monitoring the validity of results. The resulting data is recorded in such a way that trends are detectable and, where practicable, statistical techniques are applied to review the results. This monitoring is planned and reviewed and includes, where appropriate, but not limited to:

- use of reference materials or quality control materials;
- use of alternative instrumentation that has been calibrated to provide traceable results;
- functional check(s) of measuring and testing equipment;
- use of check or working standards with control charts, where applicable;
- intermediate checks on measuring equipment;
- replicate tests using the same or different methods;
- retesting of retained items;
- correlation of results for different characteristics of an item;
- review of reported results;
- intralaboratory comparisons;
- testing of blind sample(s).

BFAR RFLD XII monitors its performance by comparison with results of other laboratories, where applicable and appropriate. This monitoring is planned and reviewed and includes, but not limited to, either or both of the following:

- participation in proficiency testing;
- participation in interlaboratory comparisons other than proficiency testing.

Data from monitoring activities is analyzed, used to control and, if applicable, improve the laboratory's activities. If the results of the analysis of data from monitoring activities are found to be outside pre-defined criteria, appropriate actions are taken to prevent incorrect results from being reported.
