## 9Introduction

This procedure describes the measures undertaken for transportation, handling, receipt, protection, storage, retention and/or disposal of test items for analysis in RFL XII according to the requirements of the sub clause 7.4 of the PNS ISO/IEC 17025:2017 standard.

### 1. Responsibilities

1. Laboratory Manager
2. Quality Assurance Manager
3. Technical Manager
4. Customer Service Officer
5. Laboratory Analysts

### 2. Receipt of Incoming Test Items

2.1. Incoming test items are received by the Customer Service Officer and recorded using the form LF 06-02, Request for Laboratory Analysis and LR 06-01, Receiving and Releasing Logbook. These are then checked macroscopically for any possible damage according to specific procedures and instructions in the LF 06-01, List of Analyses and Fees.

Depending upon the type, incoming items may be:

1. Live, chilled, fresh and frozen fishery and aquaculture products are packed within boxes in appropriate condition.
2. Water samples are stored in appropriate containers.
3. Samples for Microbiological Analyses are stored in sealed and sterile containers.

2.2. Each incoming test item is uniquely coded according to LR 06-01, Receiving and Releasing Logbook and is forwarded to the respective destination laboratory unit by the use of the appropriate means. This code provides a traceability chain of all steps of the service cycle related to the analysis of each test item.

2.3. Incoming test items are taken to the different laboratory units together with the LF 06-04, Job Routing Form for analysis.

2.4. The results of analysis are based on samples received.

|                                                      |                               |                              |                         |
|------------------------------------------------------|-------------------------------|------------------------------|-------------------------|
| Document Type<br><b>Standard Operating Procedure</b> | Revision No:<br>0             | Date Adopted:<br>13 Aug 2019 | Page No:<br>Page 2 of 3 |
| Document Code:<br><b>SOP-07</b>                      | <b>HANDLING OF TEST ITEMS</b> |                              |                         |

2.5. The laboratory informs customers submitting samples with known deviations (not properly stored, spoiled/rotten, experimental items) regarding its possibility of affecting the result of analysis (Example: results outside standard limits) through LF 06-08, Sample Waiver Form.

2.6. Each sample will have its own Job Routing Form, regardless of the RLA number.

2.7. The date and time of sample reception, RLA number, laboratory code and sample type will be filled-up by the Customer Service Officer. Sample and form will be given to designated laboratory unit where the analyst will fill-up the date and time for each sample preparation and analysis. Results and percent recovery, if needed, will also be filled-up by analyst before returning the slip to the Customer Service Officer to prepare the report of test. The Customer Service Officer shall fill-up the date and time of the preparation of test report and date approved for release.

2.8. If additional analysis is requested by the customer, a new RLA is given for customer to fill out. A new laboratory code and RLA is assigned to the sample. Customer Service Officer must inform Technical Manager or analyst regarding additional analysis requested. Sample is given to analysts with the Job Routing Form.

### **3. Handling of Incoming Test Items in the Laboratories**

3.1. Test item upon its receipt in the respective laboratory is stored in designated areas under controlled environmental conditions and equipment as long as required by the respective specifications and recorded in the form LF 02-01, Environmental Conditions Monitoring and LF 03-05, Equipment Usage and Maintenance.

3.2. The laboratory makes sure that the assigned code is retained with the test item throughout the testing process to ensure that items are traceable.

3.3. The laboratory maintains enough amount of retention sample to repeat the analysis for confirmation when necessary.

### **4. Storage and Disposal of Test Items**

#### **4.1. Storage and Disposal of Meat Samples**

Meat samples such fishes, shrimps and other aquatic animal products are homogenized, if needed, placed in a re-sealable bag and stored in the sample freezer ( $\leq -4^{\circ}\text{C}$ ).

| Document Code:<br><b>SOP-07</b>                      | <b>HANDLING OF TEST ITEMS</b> |                              |                         |

Excess samples are disposed immediately unless the customer has specified, in their request, that they will retrieve the sample after analysis. Homogenized and retention samples are stored for at least two weeks and disposed after the result has been released.

#### 4.2 Storage and Disposal of Water and Ice Samples

Water samples are stored in the refrigerator (4°C to 8°C) and testing is done within six hours upon receipt and disposed after the analysis is made.

Note: Date of disposal is recorded in LF 07-CHE-01, Sample Storage and Disposal Logbook (Chemistry), LF 07-MIC-01, Sample Storage and Disposal Logbook (Microbiology), LF 07-FIS-01, Sample Storage and Disposal Logbook (Fish Health).
