Document Type Work Instruction	Revision No: 0	Date Adopted: 13 Aug 2019	Page No: Page 1 of 3
Document Code: WI-01	SELECTION, VERIFICATION AND VALIDATION OF METHODS		

Introduction

This work instruction describes the process for the selection, verification and validation of test methods and ensures that the laboratory uses methods within its capability and which meet the requirements of the customer according to sub clause 7.2 of PNS ISO/IEC 17025:2017.

1. Responsibilities

1. Laboratory Manager
2. Quality Assurance Manager
3. Technical Manager
4. Laboratory Analyst

- 1.1 The Technical Manager takes charge of the technical operations of the laboratory such as test method selection, verification, estimation of measurement of uncertainty.
- 1.2 The analyst is responsible for carrying out verification activities according to the plan and reporting the results to the Technical Manager.

2. Test Methods

- 2.1 This covers all existing laboratory methods, standard or developed outside of the laboratory that are being used as reference by the RFL XII. This applies to all laboratory analyses that will be conducted by the RFL XII where absence of an existing test method requires the need to develop or modify a new one.
- 2.2 The RFL XII uses appropriate and validated methods and procedures for testing fish and fishery products within its scope. These include handling, storage, and preparation of items for testing and, where appropriate, estimation of the measurement uncertainty for analysis of test.
- 2.3 Procedures for the development, modification and selection of methods and method verification are established (see par. 3. in this document).
- 2.4 The laboratory uses non-standard method for laboratory tests with modifications. They are validated by the method developers and verified by the RFL XII to ensure its fitness

Prepared by: MA. MAURICE A. BANQUILING Quality Assurance Manager	Reviewed and Approved by: EUGENE GAY B. JAMORA Laboratory Manager

for the intended purpose. The results of verification are recorded. Verification is carried out prior to the method's first use and when major changes in the method are adopted (WI 01-01, Method Verification).

- 2.5 The method's performance is evaluated through the use of reference standards, control charts, scheduled inter-laboratory comparison and Proficiency Testing Participation (LF 09-01, Quality Control).
- 2.6 The laboratory has instructions for all relevant methods and procedures from handling and preparation of items for testing and use of equipment. Deviations are documented, technically justified, authorized and accepted by the customer.
- 2.7 All information regarding reagent preparation is placed in LF W01-01 (Reagent and Media Preparation Logbook).
- 2.8 The laboratory uses computer software for generating testing results. Data are stored and protected for its integrity and confidentiality, as in the control of records. All instructions, standards, manuals and reference data relevant to the work of the laboratory are kept up to date and are readily available to personnel based on SOP-13, Document Control and SOP-14, Control of Records.

3. Development, Modification and Selection of Methods

- 3.1 Identify the most likely or most appropriate method based on the cost, availability of necessary equipment and tools, reagents, and capability of the personnel.
- 3.2 Carry out method verification (WI-01-01) and estimation of measurement uncertainty (WI-02) for commercially developed methods which have been extensively validated by the international organization or manufacturer.
- 3.3 Evaluate the results of the method verification with respect to the relevant criteria or parameters and file them together with the estimated measurement uncertainty.
- 3.4 Determine if the requirements of the existing customers can be met and make an appropriate recommendation.
- 3.5 Decide if the method is suitable for the purpose or not.
- 3.6 If the method is suitable, **proceed to step no. 3.8.**
- 3.7 If it is not, further optimization may be necessary, or a whole new procedure required. Return to step 3.2 of this document procedure.
